WO 2004/014227 PCT/IL2003/000651

## **CLAIMS**

1. A system for in vivo analysis, said system comprising

agglutinative particles capable of interacting with at least one analyte so as to cause an optical change; and

at least one in vivo imaging system configured for detecting the optical change.

- 2. The system according to claim 1 comprising at least one illumination source.
- 3. The system according to claim 1 comprising at least one chamber, said chamber configured for containing the agglutinative particles and an in vivo sample.
- 4. The system according to claim 3 wherein the sampling chamber is at least partially transparent.
- 5. The system according to claim 3 wherein the imaging system is configured for imaging the chamber.
- 6. The system according to claim 1 wherein the imaging system is configured for imaging a body lumen.
- 7. The system according to claim 1 wherein the agglutinative particles include at least one molecule selected from the group consisting of: antibodies, antigens, cells or linkers.
- 8. The system according to claim 3 wherein the at least one analyte is in the in vivo sample.
- 9. The system according to claim 1 wherein the optical change is selected from the group consisting of: a change of color, a change of hue, a change of brightness, a change of intensity, a change of optical density, a change of transparency, a change of light scattering or any combination thereof.

WO 2004/014227 PCT/IL2003/000651

10. The system according to claim 1 wherein the in vivo imaging system includes at least a photodiode, a CCD or a CMOS.

- 11. The system according to claim 6 wherein the body lumen is a gastrointestinal tract.
- 12. The system according to claim 1 comprising a transmitter.
- 13. The system according to claim 12 wherein the transmitter is configured for transmitting image data.
- 14. A device for in vivo analysis, said device comprising the system according to claim 1 or 12.
- 15. The device according to claim 14 wherein the device is selected from the group consisting of: needles, stents, endoscopes, catheters or ingestible capsules.
- 16. An ingestible capsule comprising:

an optical window, said window having immobilized thereto agglutinative particles capable of interacting with at least one analyte so as to cause an optical change;

at least one imaging system configured for detecting at least the optical change; and

a transmitter configured for transmitting image data to an external receiving system.

- 17. The device according to claim 16 comprising at least one chamber, said chamber configured for containing the agglutinative particles and an in vivo sample.
- 18. A method for in vivo analysis, the method comprising the steps of:

obtaining a sample from a body lumen; combining in vivo the sample with agglutinative particles; and detecting at least one optical change in the combined sample.

WO 2004/014227 PCT/IL2003/000651

19. The method according to claim 18 wherein the step of detecting at least one optical change includes imaging the combined sample.

- 20. The method according to claim 18 comprising the step of obtaining at least one image of the body lumen.
- 21. The method according to claim 18 or 20 comprising the step of transmitting data to an external receiving unit.
